

Joget DX

Setting up Joget

 <http://facebook.com/jogetworkflow>

 <http://twitter.com/jogetworkflow>

Prerequisites

- Introduced to Joget.
- Good understanding on how to operate a computer as an end user.

Content

1. System Requirements
2. Installation
3. Overview of User Management
4. Joget End User Experience
5. Joget App Generator

Chapter 1

System Requirements

Minimum System Requirements

- Operating System: Windows or Linux
- Free system memory: 512MB
- Free disk space: 2GB

- Note: Minimum spec is only good for learning purposes
- Strictly **NOT** for production

System Requirements for Production

- It depends...
 - Read more at **Joget Deployment Best Practices**

<https://dev.joget.org/community/display/DX7/Deployment+Best+Practices>

Chapter 2

Installation

Installation

- Installers can be downloaded from joget.org/download/
- Instructions are available at dev.joget.org/community/display/DX7/Installation+on+Windows

What is needed?

- Database system (RDBMS) such as MariaDB, MySQL, MS SQL, Oracle DB2...
- Web Application Server such as Apache Tomcat, WildFly, WebLogic, etc.

Installation Bundles

- On Windows
 - **ALL** editions now come bundled with Tomcat & MariaDB
 - No-frills one-click installation process!
- On Linux
 - Joget with Tomcat bundled

Quick Tip

- Tomcat runs at port **8080** by default.
- MariaDB runs at port **3307** with default credentials (**root** with no password)

Apache Tomcat 8 (JSP Servlet Container)

MariaDB (Database)

Windows - Starting & Stopping Joget

- **To Start:**

Start > Programs > Joget > Start Joget Server

Leave the Tomcat console window open.

Closing the console window will terminate Tomcat (and Joget Server).

- **To Stop:**

Start > Programs > Joget > Stop Joget Server

On certain systems, you will need to manually close the Tomcat console window after stopping the Joget Server.

Linux - Starting & Stopping Joget

- **To Start:**
 - Start the database server used to host database used by Joget Workflow.
 - Start the Tomcat server accordingly.
- **To Stop:**
 - Likewise, in reverse order, stop the Tomcat server, then the database server.

Interacting with Joget

- Once you have the App Server started, from your web browser, navigate to -->
`http://[domain]:[port]/[context path]`
- OR, just use the “App Center” shortcut in Windows Start Menu.

Default URL

[domain] = localhost

[port] = 8080

[context path] = jw

<http://localhost:8080/jw>

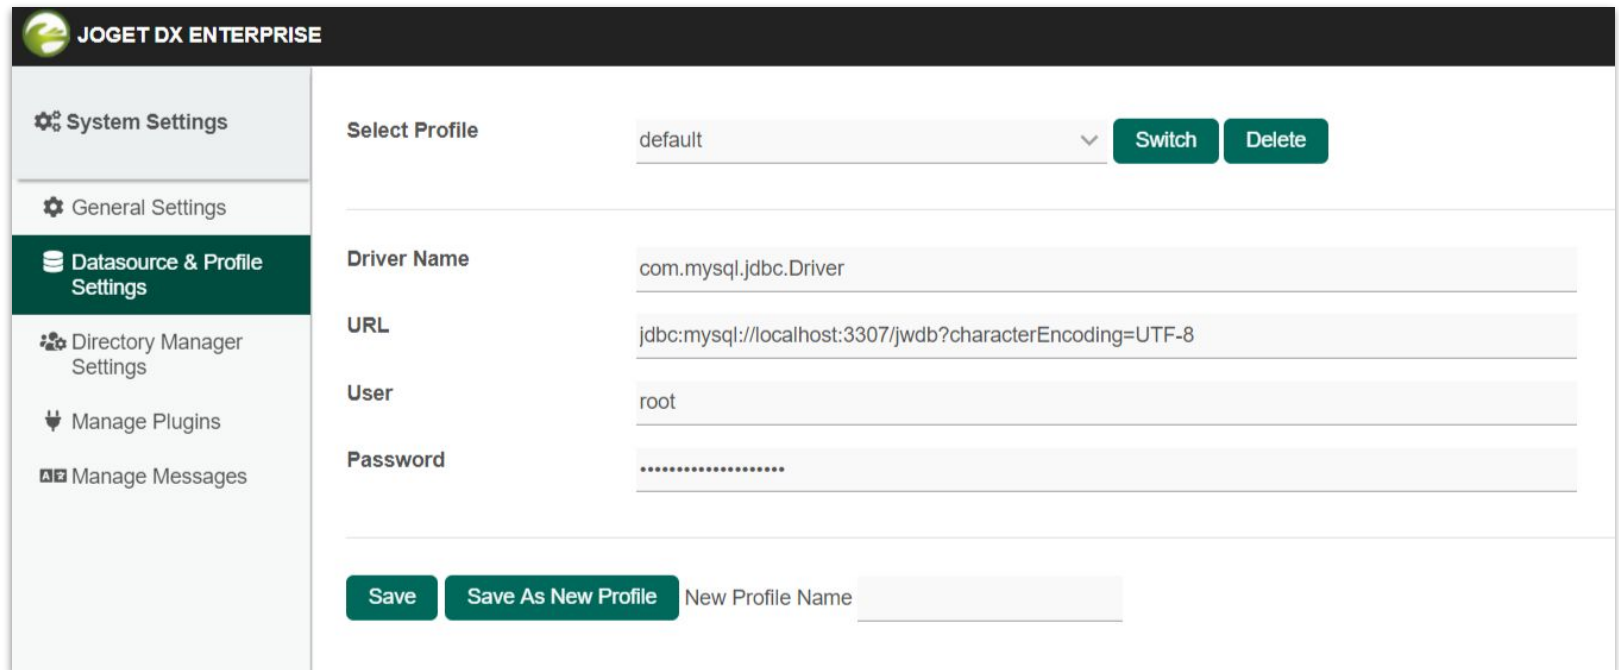

Default Admin Credential

Username = admin

Password = admin

Optional - Changing the Default Database

- Click on the pencil icon on the bottom right.
- Go to “Settings”, then “Datasource & Profile”.
- Enter your preferred database’s information.
- Save!

The screenshot shows the 'JOGET DX ENTERPRISE' settings page. The left sidebar contains a menu with the following items: System Settings, General Settings, Datasource & Profile Settings (highlighted), Directory Manager Settings, Manage Plugins, and Manage Messages. The main content area is titled 'Datasource & Profile Settings' and contains the following fields and controls:

- Select Profile:** A dropdown menu showing 'default' with a pencil icon on the right. Below it are 'Switch' and 'Delete' buttons.
- Driver Name:** A text input field containing 'com.mysql.jdbc.Driver'.
- URL:** A text input field containing 'jdbc:mysql://localhost:3307/jwdb?characterEncoding=UTF-8'.
- User:** A text input field containing 'root'.
- Password:** A password input field with masked characters '.....'.

At the bottom of the form, there are three buttons: 'Save', 'Save As New Profile', and a text input field for 'New Profile Name'.

Or... Sign up for a Joget Cloud account

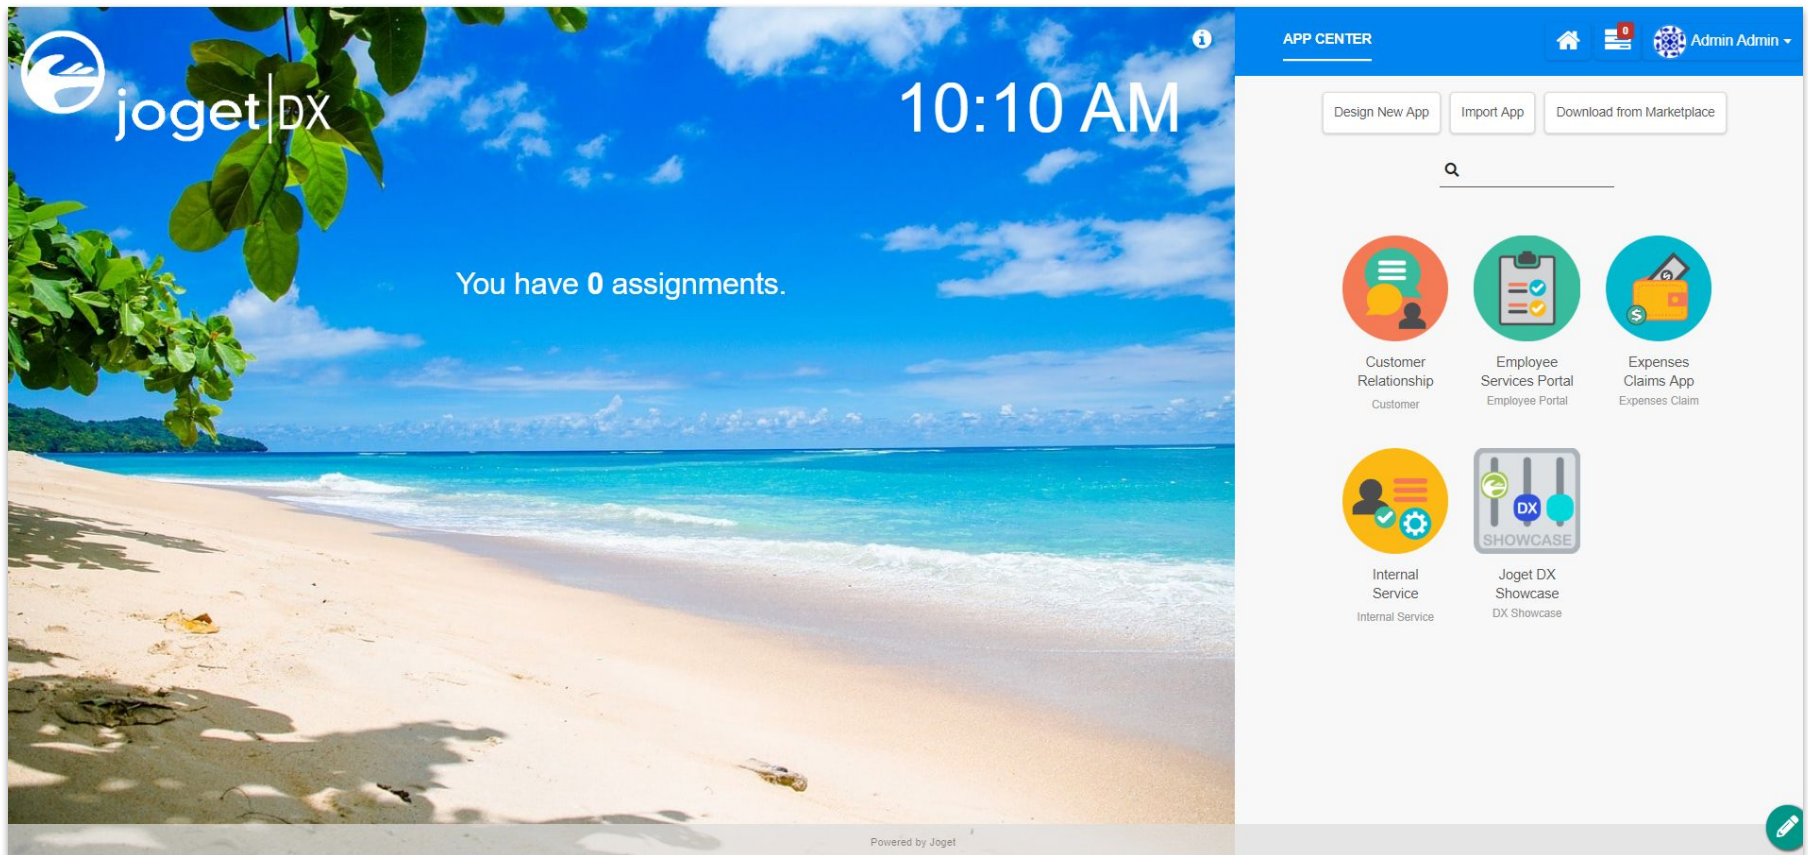

- Go to www.jogetcloud.com
- Register for a new account
- Check email for verification to finish provisioning account.
- Once registration is complete, navigate to the url that you keyed in during registration.

Example: *yourDomain*.cloud.joget.com

- No installation setup to go through!
- Browser only. No need to setup anything on premise.
- All features of Joget Enterprise available.

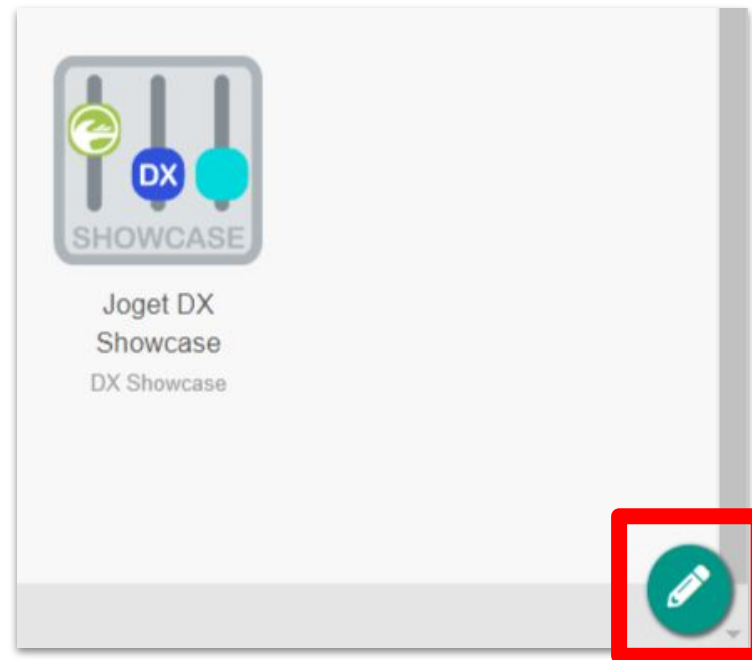

Introducing the App Center

- The default landing page for Joget (customizable) is the App Center, where all **Joget Apps** will be listed down.

Introducing the Admin Bar

- Once logged in as admin, the Admin Bar will show up. It is conveniently placed on the bottom right of the page at all times for convenient access to admin features.

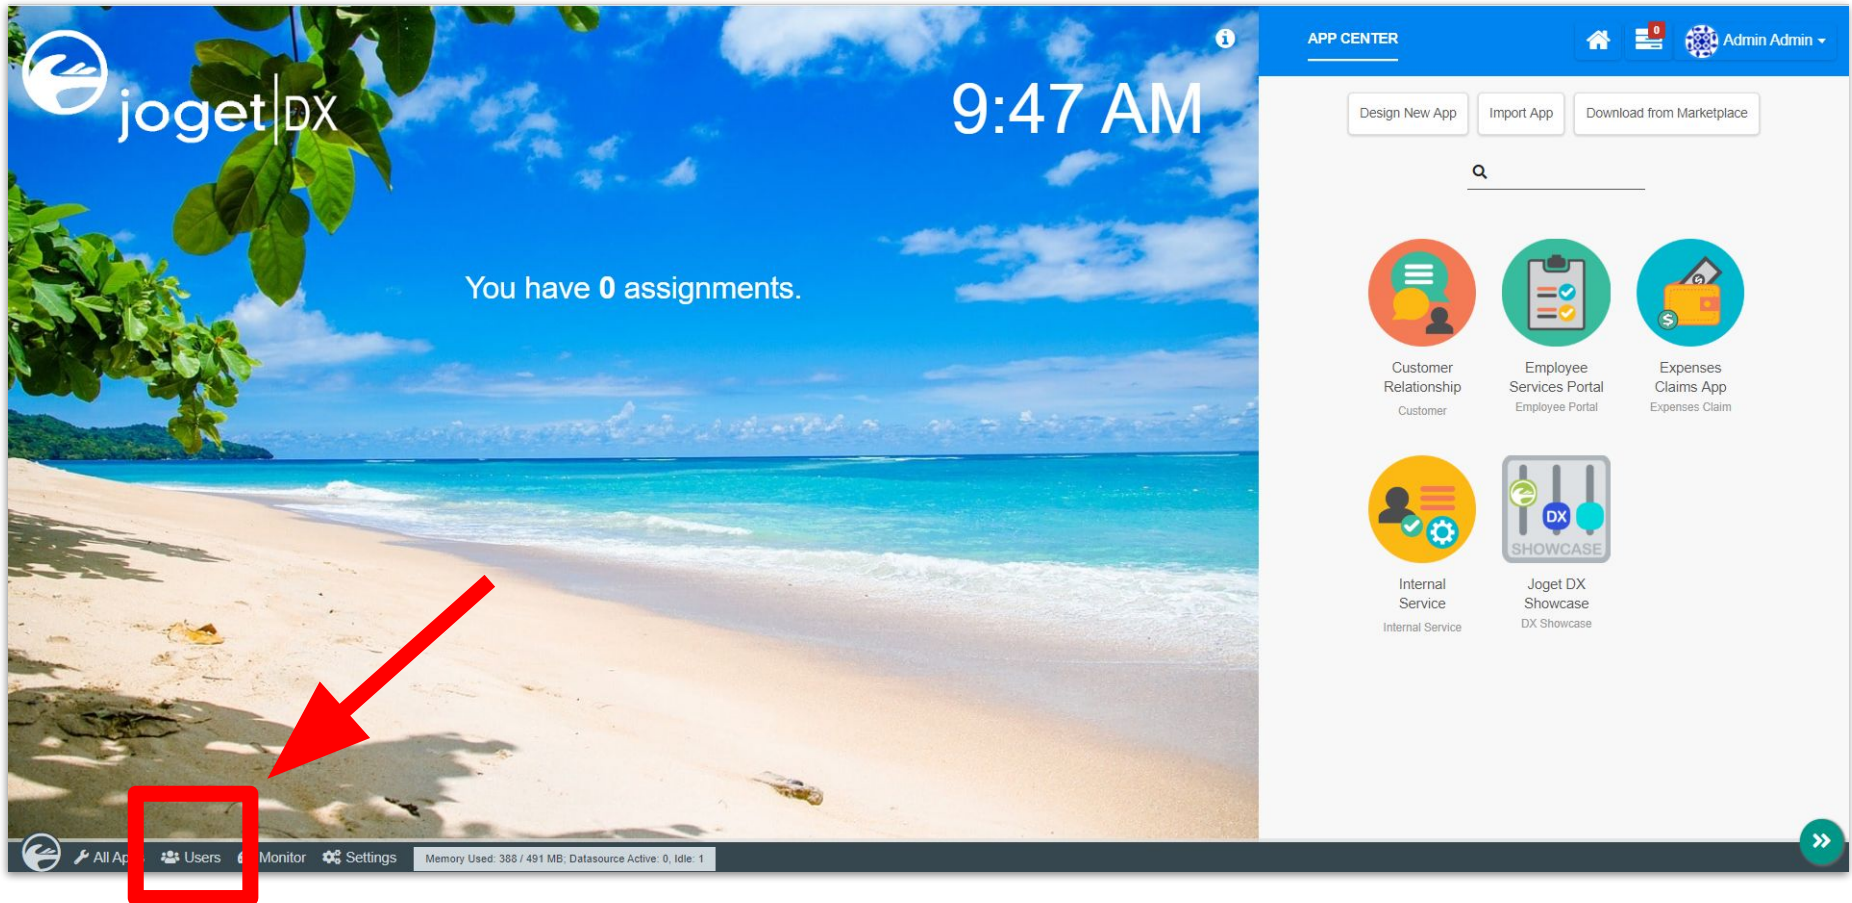

Chapter 3

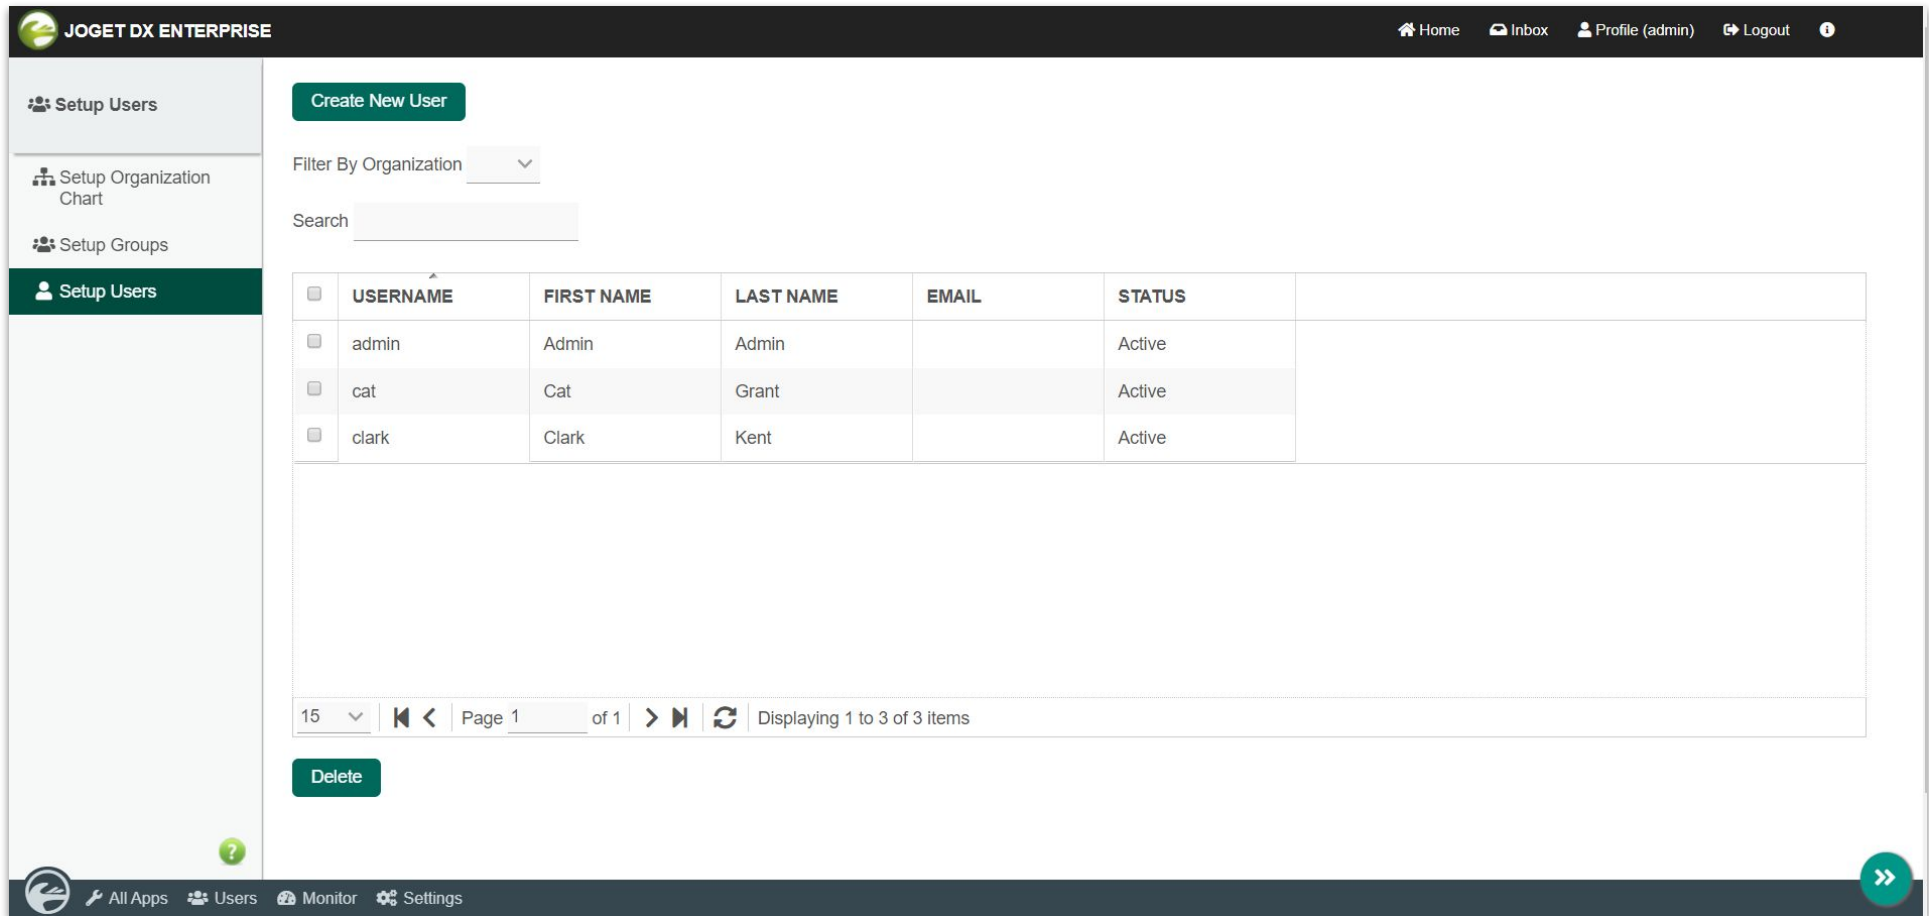

Overview of User Management

Accessing the User Management

- From the Admin bar, click on **Users**.

Overview of User Management

The screenshot displays the 'Setup Users' page in the Joget DX Enterprise application. The interface includes a top navigation bar with 'Home', 'Inbox', 'Profile (admin)', and 'Logout' options. A left sidebar contains navigation links for 'Setup Users', 'Setup Organization Chart', and 'Setup Groups'. The main content area features a 'Create New User' button, a 'Filter By Organization' dropdown, and a search input field. Below these is a table listing three users: 'admin', 'cat', and 'clark'. The table has columns for 'USERNAME', 'FIRST NAME', 'LAST NAME', 'EMAIL', and 'STATUS'. A 'Delete' button is located below the table. At the bottom, there is a pagination control showing 'Page 1 of 1' and 'Displaying 1 to 3 of 3 items'. A footer bar contains 'All Apps', 'Users', 'Monitor', and 'Settings' icons, along with a help icon and a right arrow.

Delegate App Designer Role

Select Organization

Select Users

Select Groups

Discussion

- Can we use LDAP/AD alongside with Joget?

Chapter 4

Joget End User Experience

Try it Out

- From the list of sample apps pre-installed in your Joget, try out one of the apps as an end user.

For example:-

- HR Expenses Claim App
 - Submit as Cat
 - Approve as Clark
 - Verify as Admin
- Study the App design.
 - Process, Form, Datalist, and Userview

Chapter 5

Joget App Generator

Joget App Generator

- Quick and convenient way of creating a new Joget Workflow App based on ready/existing template.
- THINK! App Generator as the **boilerplate** for your App design.

Let's Try it Out!

- Create a new Joget App
 - Name it as Express Leave App
- Create a new Form
 - Name it as Application Form.
(id: applicationForm, table: eleave_applications)
- On top right of the Form Builder
 - Click on Generate App
 - Check all
 - Generate

Try out the Joget Experience again on this newly created App!

Module Review

1. System Requirements
2. Installation
3. Overview of User Management
4. Joget End User Experience
5. Joget App Generator
